

# Post Training Action Plan

A resource to help you and your trainee gain the most from the ProPharmace pre-registration training days

# Day 4

I Antibiotics

II Bladder and Urinary Disorders

# I Antibiotics

## Learning Outcomes

Your trainee should now be familiar with drugs used to treat infections. They have been provided with the ProPharmace Antibiotics Guide and alerted of key warnings and counselling points associated with common antibiotics.

## Action Plan

When dispensing prescriptions for antibiotics check with your trainee what they understand about the correct dosage, cautions and advice required for the antibiotic. Then ask your trainee to counsel the patient on how to take the medicine.

## Targets

## II Bladder and Urinary Disorders

### Learning Outcomes

Your trainee should now be familiar with drugs used to treat bladder and urinary disorders. They have been provided with a case study on urinary incontinence and a pre-work activity on urinary retention.

### Action Plan

When dispensing prescriptions for antimuscarinics, check with your trainees if they understand the indication, the required monitoring and patient counselling.
